

## INSULAPACK™ Wall Cavity Insulation

- Insulapack wall cavity insulation comes pre-cut in 48", 24" or 16" strips to fit between standard studs
- Can be custom cut to your specs
- Cut insulation to desired length
- Cut holes for wires or other hardware that must protrude through
- Fit snugly into place
- R10.6 per inch

- Insulapack™ is a multi-layered, laminated plastic cellular material filled with insulating gas complete with a metallic reflective outer layer which provides a very high thermal resistance (R value) to insulate walls, ceilings, mechanical duct work and piping.
- The outer metallic foil layer of Insulapack™ ensures that the product will not provide radiant heat transfer and its plastic cellular construction making the product impervious to humidity.
- The insulated gas within the green-coloured plastic cells is inert, non-reactive and not flammable.
- The multi-laminated plastic cells will not leak, and the material has been aged tested to perform effectively for a minimum of 20 years.
- This material ensures extremely low water vapor permeance acting as a vapor barrier and will not corrode.
- Resists mold and will not provide a nesting environment for animals and insects.
- With Insulapack's™ Acoustic sheets, provides for a STC rating of 65

Tested and meets all ULC/UL requirements for wall cavities. Formaldehyde free • Extremely light weight - Does not adsorb/absorb moisture – UL & ULC Certified
